
ARDUINO Ventrilocat

A guide by
Oliwia Widuto 40325295
Bianka Paculanang 40291271

—

How many times have you
said something you **didn't**
mean?

Us too.

When your feelings get in the way,
let Ventrilocat do the talking.

The VENTRILOCAT is
an interactive heart
sensor which conveys

6 PRIMAL
EMOTIONS in the
most fun way you've
seen to date!

Joy

Surprise

Sadness

Anger

Disgust

Fear

Instead of saying too much, let a
cute pre-programmed cat do the
talking.

Scary

Considerably less

The Design

Interface

The 2 boards will be contained within a felt bracelet, punctured with 6 emotion buttons and LED at the back, and an animal head at the front.

Pulse Sensor

The main concept of our project stems from the Pulse Sensor project. This design monitors and displays a raw pulse sensor signal with the inclusion of an LED that blinks with every heartbeat.

Utilising YOUR heartbeat

So you know your heartbeat. What's next?

→ **LED lights**

1 of 3 LEDs will light up to show if your heart rate is low, medium or high

→ **Voiceover Emotions**

React to your heart rate by using 1 of 6 emotions to tell your friends how you feel

Sound Board

In addition to the heart sensor, there is also the inclusion of a soundboard which contains over 30 different phrases at the push of 1 of 6 buttons which convey primal emotions in a lighthearted way.

Changes

Here is how we're making the designs our own

- **Felt Exterior**
- **Arduino Pro Mini instead of Uno**
- **Combining 2 projects**
- **Animal persona makes project more tangible**
- **3 LEDs instead of flashing light as repetition becomes irritating**
- **Giving project a bigger emotional purpose than just a heart sensor and soundboard**

The Hardware

Felt and Velcro Casing

2. What We Need

- **Arduino Pro Mini 5V £3**
Small light board to fit in bracelet
- **Adafruit Audio Mini £17**
Buttons to Data
- **Grove Mini Speaker £7**
Data to Audio
- **Felt + Velcro £2**

- **6 LEDs £2**
Small light board to fit in bracelet
- **Heart Rate Sensor £5**
Buttons to Data
- **Wires £3** Connect input with output
- **Arduino Software (free)**
C++

Altogether : £39

In Context

Daniel

Daniel is a young adult who developed anxiety moving away from home and working full time.

When he's around his friends, he doesn't want to ruin his their fun by explaining everything going through his head. However, he wants them to know why sometimes he isn't himself.

Ventrilocat senses Daniel's heart rate to let him know when his body is reacting to stress. When his chest feels too tight to speak, all he has to do is push a button to let his friends know.

A hand holding a smartphone, with the screen displaying some text. The background is a blurred red surface, possibly a wall or a piece of clothing. The text is overlaid on the left side of the image.

**In the UK alone, 3
million people
suffer from anxiety.**

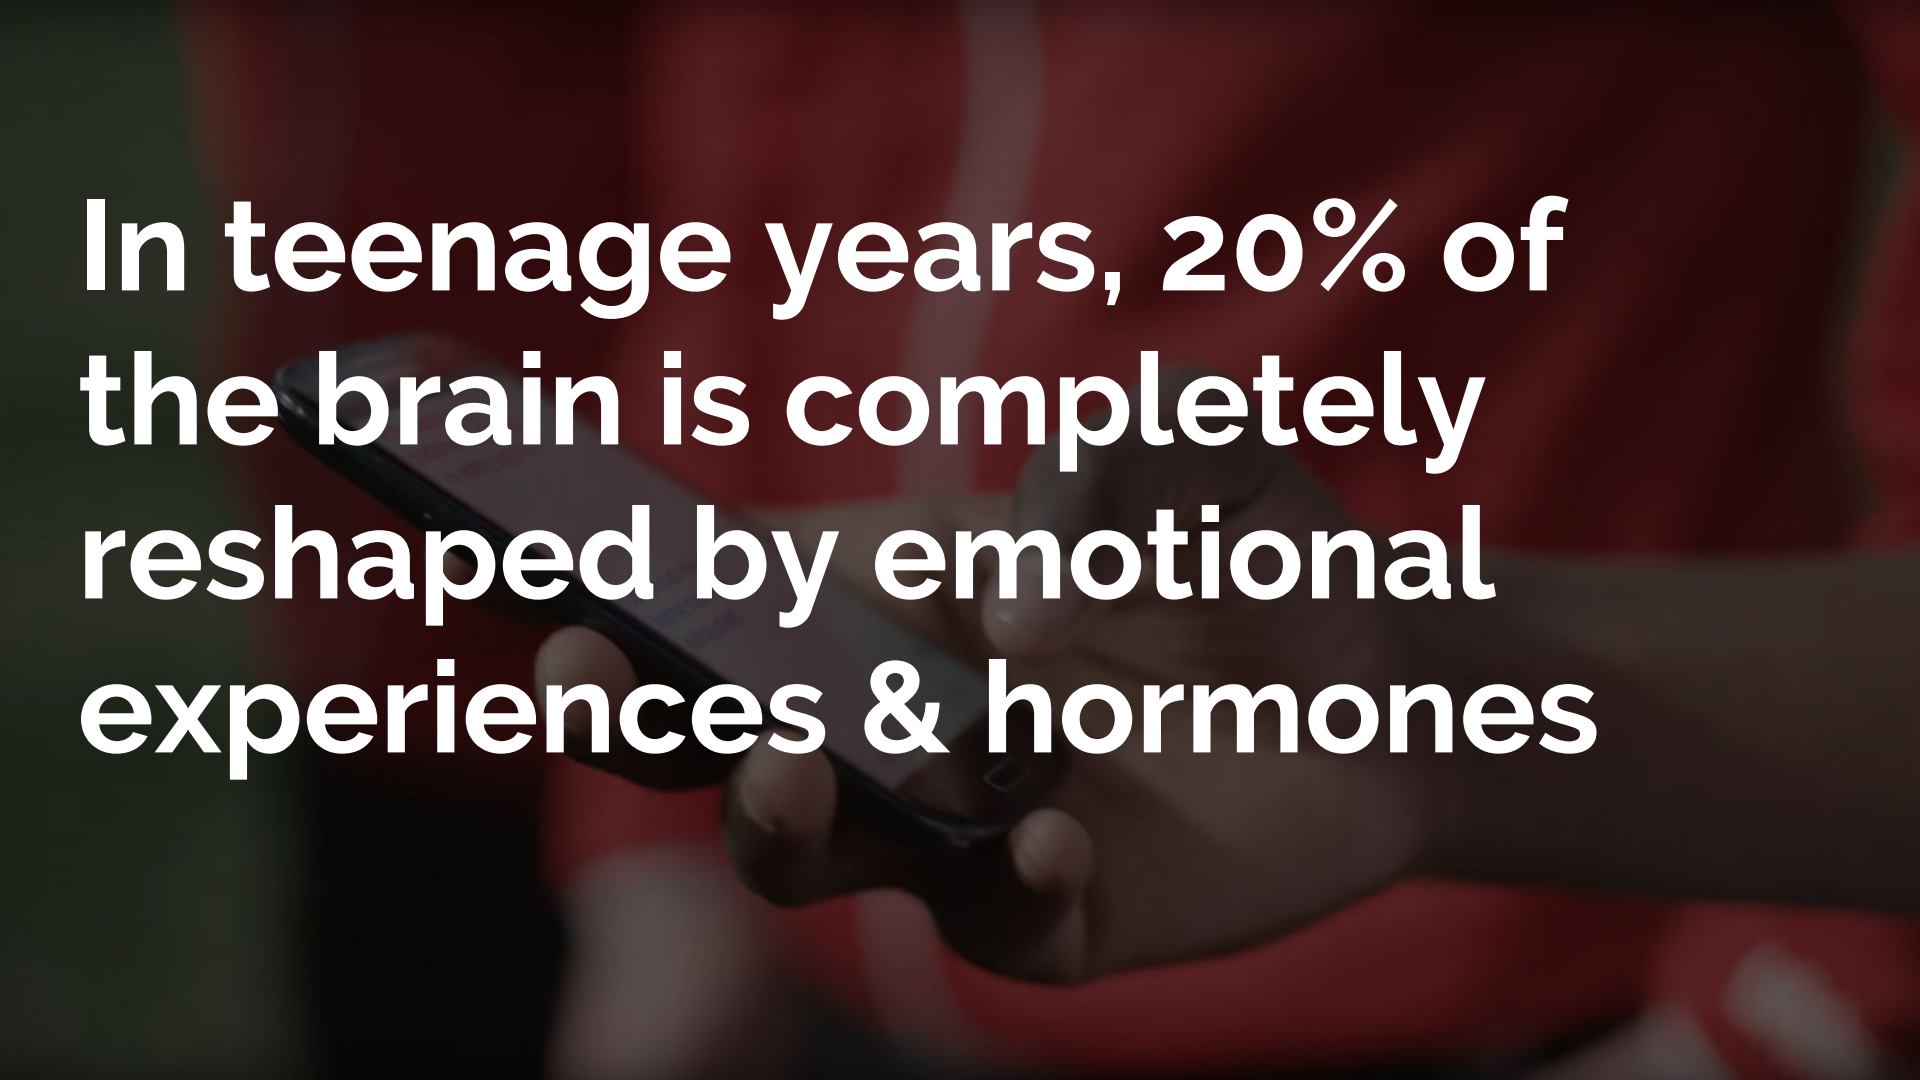

Rosabella

Growing up translates to a turmoil of developing emotions, flipping all kinds of hormones around Ellie's brain.

When no one including herself understands what she's going through, Ellie uses the Ventrilocat to trace her mood back to one of 6 most instinctive feelings.

Putting a name on her feelings makes them much less daunting and she loves the cute design!

A hand holding a smartphone, with the screen displaying some text. The background is a blurred red surface. The text is overlaid on the image in a large, white, sans-serif font.

**In teenage years, 20% of
the brain is completely
reshaped by emotional
experiences & hormones**

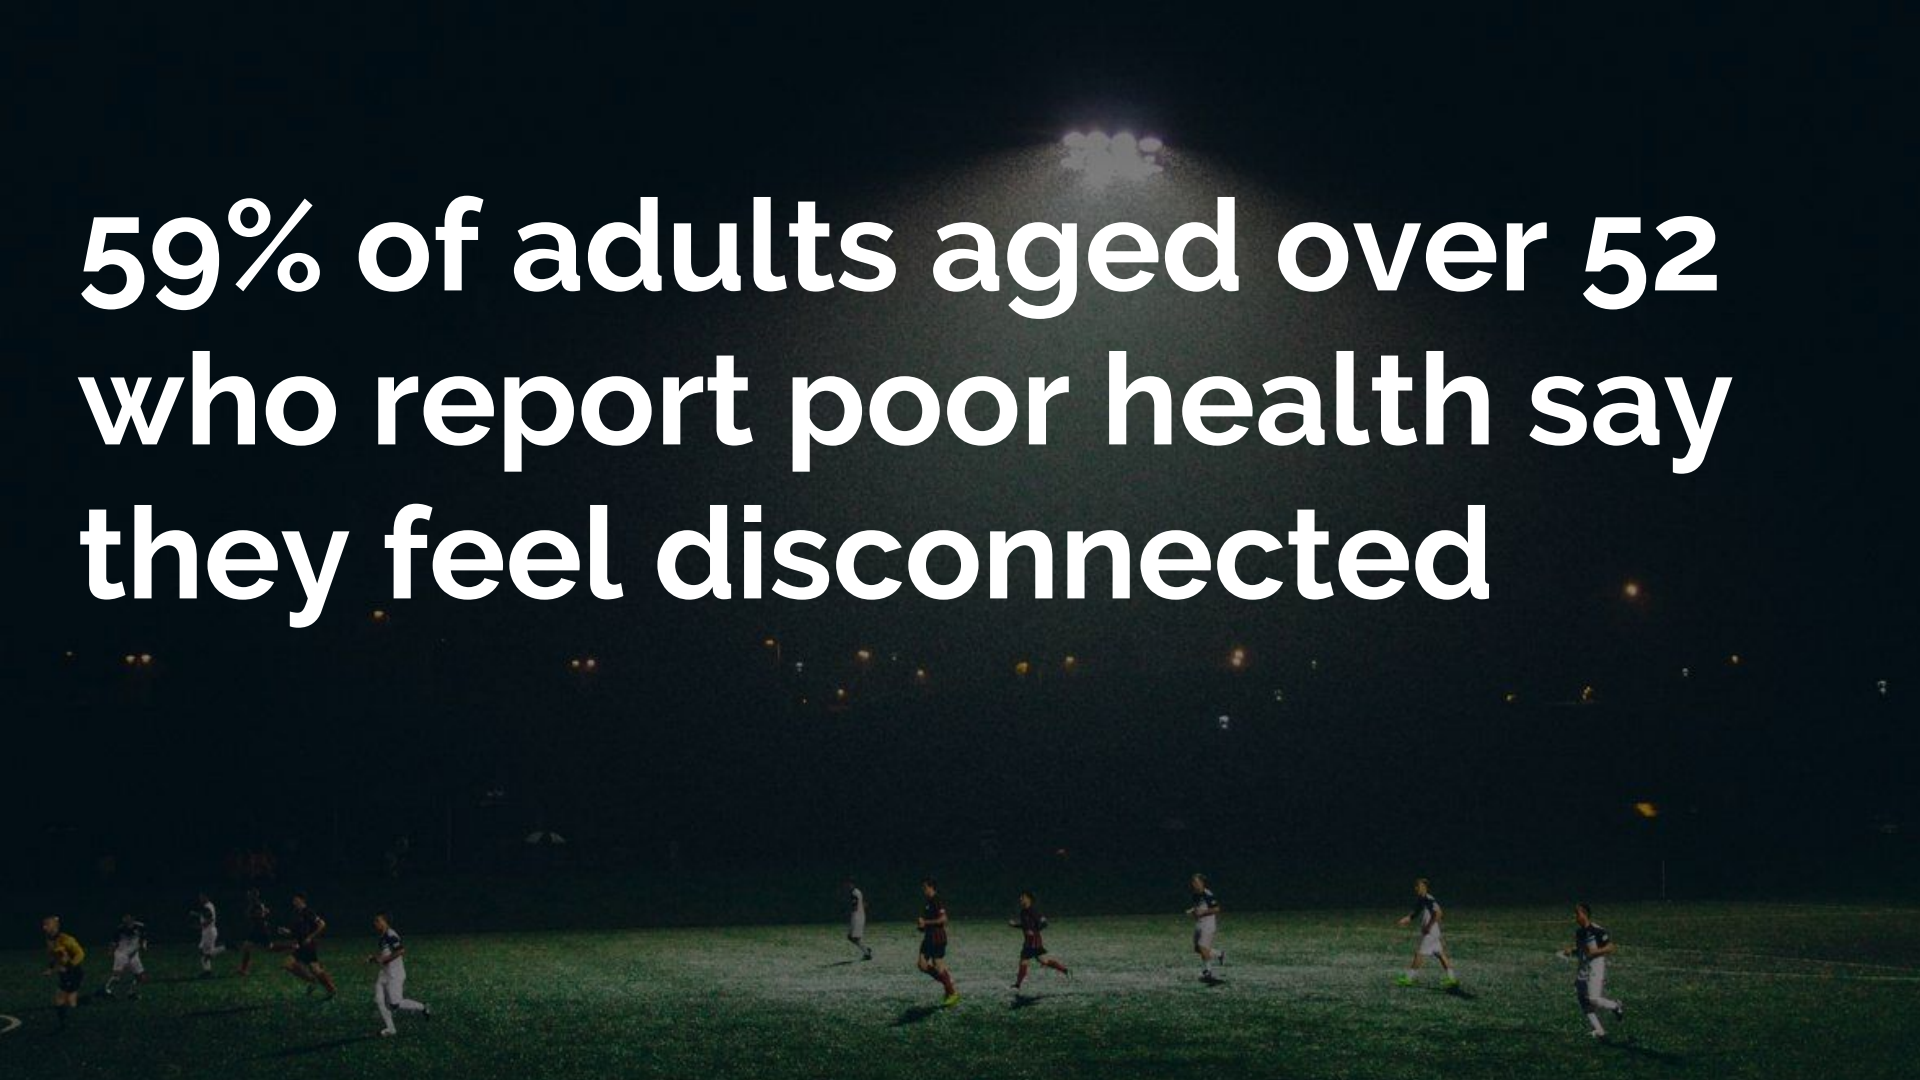

Declan

Growing up in the 40s, Declan was taught men shouldn't talk about their feelings. Life has made him tough and sometimes he just can't express how much it means to see his granddaughter smile.

Not only do his grandkids adore when he lets them sit on his knee and play with the Ventrilocat, but at the push of a button he can let them know how happy and grateful he is for their surprise visit!

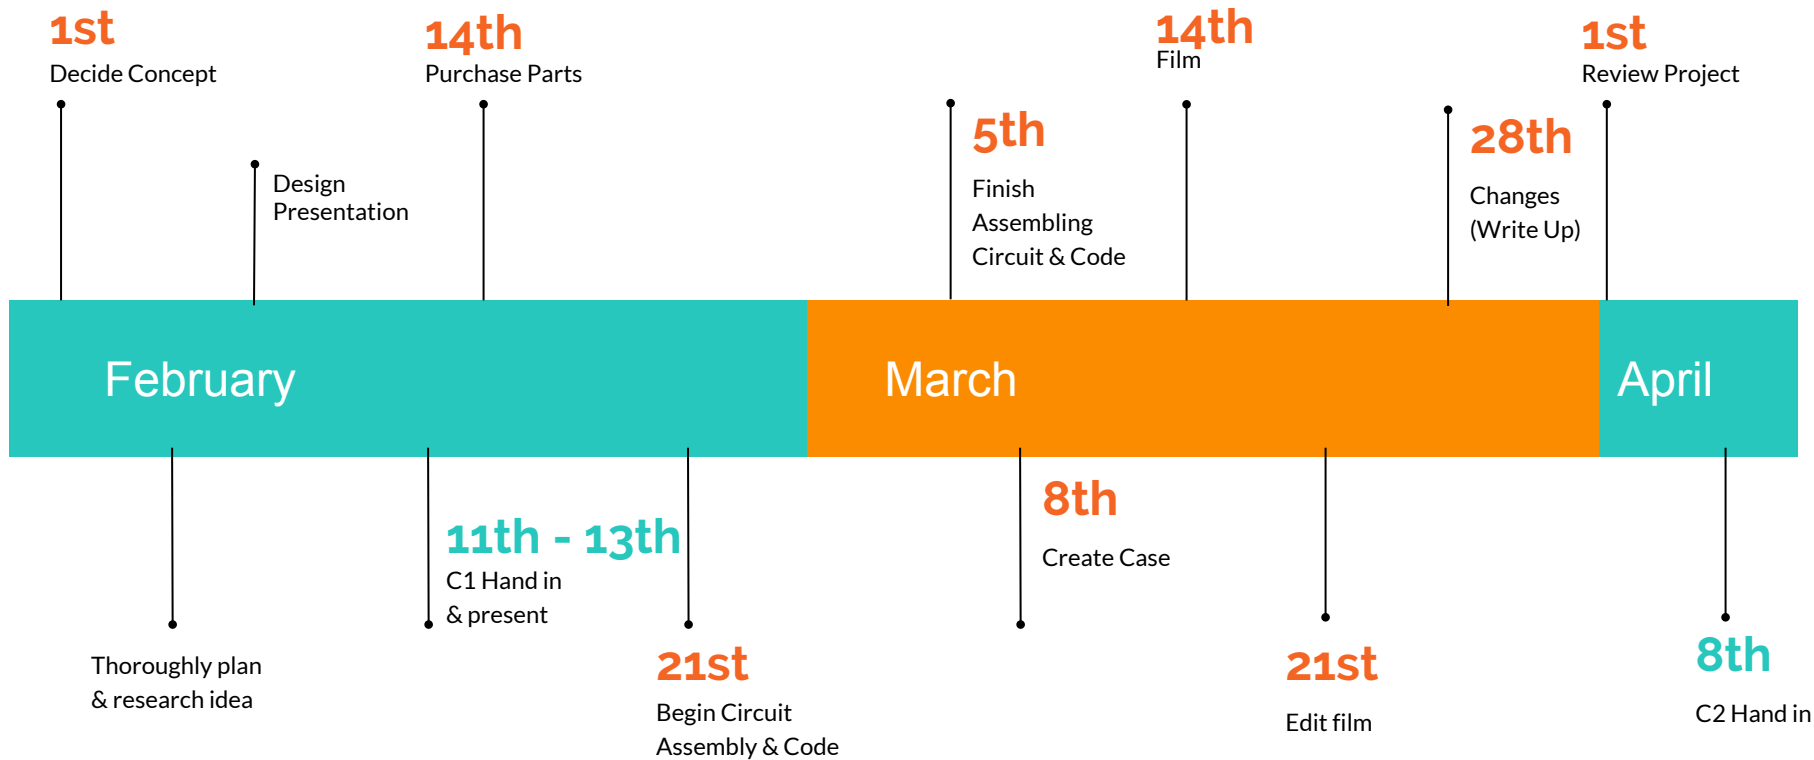

**59% of adults aged over 52
who report poor health say
they feel disconnected**

Offload your communication
on **Ventrilocat.**

The Timescale

The background of the image shows the silhouettes of several people sitting at a long table, looking out a large window. Outside the window, a city skyline is visible, featuring a prominent domed building, likely St. Paul's Cathedral in London. The scene is dimly lit, with the primary light source being the window, which creates a silhouette effect on the people and the interior.

Ready to change the way
you communicate?

Prepare for Ventrilocat.
